

MASSAGE TOOLS

A properly functioning and nourished fascial network ensures that the body is in good condition and remains flexible. In order to keep the body flexible, FASCIQ® offers a line of various massage products that can be used for myofascial release, including foam rollers, peanut balls and massage balls.

The effects of myofascial massages with foam products:

- Increase the range of motion (mobility).
- Improve tissue perfusion.
- Increase muscle strength.
- Stimulate or sedate muscles.
- Reduce muscle pain.
- Ensure proper tissue hydration.
- Release muscle knots (trigger points).

ROLLER STING

Length 45 cm, ø 14 cm

PEANUTBALL SMALL

Length 16 cm, ø 8 cm

SINGLE BALL

ø 8 cm

PEANUTBALL LARGE

Length 24 cm, ø 12 cm

FASCIQ® is a brand of THYSOL Group B.V.. THYSOL is a leading producing medical device company. It combines excellent quality with many years of knowledge. With a team of professionals and a modern production plant, THYSOL is able to answer the markets' needs for innovative products and services. THYSOL is proud to have established a worldwide network of partners to provide the local markets with its products.

FASCIQ®

Product line for fascia
release and treatment

FASCIQ®

ABOUT FASCIQ®

Fasciae mainly consist of connective tissue in different forms and structures. They are located throughout the body and are interconnected.

Among other things, the fascial network has an effect on:

- Strength
- Movement and mobility
- The immune system
- The balance of various internal systems (lymphatic, digestive, hormonal and metabolism)
- The posture

Various products are used to treat the fasciae, to bring about a loosening of the fasciae (fascia release) and to maintain a flexible fascial network (fascia treatment). Regular use of these products can prevent injuries.

FASCIQ® is a carefully developed line of high-quality products for the (after) treatment of fasciae.

The FASCIQ® line consists of the following products:

- FASCIQ® IASTM Tools
- FASCIQ® Silicone Cuppings
- FASCIQ® Floss Bands
- FASCIQ® Wax & Cream
- FASCIQ® Foam Massage

IASTM TOOLS

FASCIQ® IASTM Tools are made of high-quality surgical SS (stainless steel) AISA 304 (1.403) and are used by the professional therapist for loosening fascial structures and trigger point therapy.

The FASCIQ® line consists of separate IASTM instruments with different shapes and with various finished edges to increase its employability.

FASCIQ® IASTM Tools stimulate:

- A flexible and well maintained, healthy fascial network
- Improved tissue perfusion
- Improved range of motion
- Mobilization of the soft tissue
- Loosening of adhesions in the connective tissue
- Treatment of trigger points

SILICONE CUPPINGS

FASCIQ® cuppings are silicon-based. By squeezing the cupping, a vacuum is created on the skin surface. The silicone cupping is easy to move on the skin if lightly rubbed with FASCIQ® Wax or Cream in advance.

The effects of Cupping:

- A relaxing, soothing and healing effect on the fascial network.
- Removal of blockages in the body.
- Fast disposal of waste and moisture (lymphatic drainage).
- Stimulates the production of collagen and elastin.
- Improved elasticity and firmness of the skin (for example, in case of cellulite).
- Improvement of scar tissue, skin adhesions and wrinkles.

FLOSS BANDS

FASCIQ® Floss Bands are latex straps that are 1 mm or 1.5 mm thick and 208 cm long. FASCIQ® Floss Bands are available in both 2.5 cm as 5.0 cm widths and are mainly used by the professional therapist for the treatment of fasciae. This treatment method is called Flossing and has led to amazing results. The type of Floss Band to be used depends on the area to be treated and on the amount of compression that is required.

The effects of Flossing:

- Fast relocation and disposal of moisture after a trauma.
- Improved range of motion in joints.
- Reduced muscle tension.
- Faster recovery of complaints.
- Pain reduction.
- Lymphatic drainage.
- Improved tissue perfusion.
- Ensures a flexible and healthy fascial network and restores balance in the body.

WAX AND CREAM

FASCIQ® wax is a natural product that consists of a mixture of wax and oil. The wax is particularly suitable for treatment with the IASTM tools but also for other massage purposes.

FASCIQ® cream is a protective nourishing cream and consists of natural ingredients. It makes skin supple and goes great with FASCIQ products like the IASTM tools and cups
